

At Biological Prospects LLC we are committed to protecting your personal information during and subsequent to internet transactions. We accomplish this via the following two measures:

1. Personal information, including your credit card number, is encrypted and sent only over secure Internet lines. While using Secure Socket Layer (SSL) technology, your Microsoft Internet Explorer or Firefox browser will let you know when the line is secure. Internet Explorer and Firefox use a "lock" icon for their browsers. These "locks" will appear on the browser when using a secure line. On both browsers the "http:" pre-fix will read "https:" when accessing a secure server. If these indicators are present, you can be confident of a secure data transaction.

2. We do not store complete credit card information on our web server.

If you are still unsure about the security of your information, or if you use a browser that does not support SSL technology, please call us toll free with your information at **1-866-510-5207**.

**Please do not email us your credit card information, as email communication is not secure!**
